KELAMIX

Product description

KELAMIX is a blend of EDTA-chelated micronutrients, specially formulated to provide optimal plant nutrition and help prevent or correct micronutrient deficiencies. Its chelated form ensures efficient availability and uptake of essential micronutrients by the plant. **KELAMIX** can be applied both as a foliar spray and through fertigation. Depending on soil conditions, the EDTA chelate remains stable within a pH range of 4 to 6.5.

Composition

Zn	Fe	Mn	Cu	Mg	Mo	B	Co
5%	4%	2%	0.5%	2%	0.1%	2%	0.1%

Paramètres physico-chimiques

Water Solubility	pH	Chloride & Sulphate
100%	5.5-7	≤0.05%

Appearance

Yellow-green powder.

Benefits

- Promote root development and vegetative growth.
- Support rapid and balanced plant growth.
- Help improve crop yield and quality.

This product is formulated to ensure residue-free application.

Pack sizes

Available in 1 kg and 5 kg bags.

Application method

- **Target crops:** Fruit trees, horticultural crops, cereals, and field crops.
- **Recommended number of applications:** 3 to 5 applications per season, depending on the crop.
- **Application rate: Foliar**: 2–3 kg/ha — **Fertigation:** 3–5 kg/ha.
- **Dilution rate: Foliar spray:** 1 kg per 600–800 L of water — **Fertigation:** 1 kg per 500–600 L of water.

Batch N°. 83, CFCIM Industrial Park, Ouled Saleh, Nouaceur
Postal Code: 27184, Casablanca – Morocco.
